SIMPLE CONCEPT. UNMATCHED PERFORMANCE.

The STS-K020 Speech Transfer System provides assistance for clear communication where normal speech is impaired by use of glass, a security screen, or other similar barriers.

This product is designed for installation at locations such as:

- Banks
- Post Offices
- Theaters
- Information Centers
- Public Transit Systems
- Ticket Counters
- Embassies
- Government Buildings

TOP FEATURES

Superior Sound Quality

Have you ever been at the ticket booth of a stadium or at your bank's drive-thru window and can barely hear what the teller is saying through the speaker?

Chances are, you have.

With the STS-K020, you'll feel like there's **no boundary** between you and the teller. Frustration and miscommunication is a thing of the past with the STS-K020's **superior sound quality**.

ADA Conscious

The STS-K020 has been designed with everyone in mind – including those with a hearing loss.

The system is integrated with a **hearing loop aerial** that creates an electromagnetic field. With the activation of the **telecoil** (T-coil) within a hearing device, crystal clear sound is transmitted to the end user.

The result? An equally enjoyable experience for all.

Level 3 Ballistic Rated

Where safety is a concern, the STS-K020 has got you covered.

It has been **field-tested and certified** as level 3 ballistic rating, which means security-conscious establishments can have peace of mind when it comes to their employee's safety.

Sleek & Modern Design

Heads will turn with the STS-K020'S sharp look. Compared to other systems, this speaker will be the clear beauty contest winner.

And the best part? You can **customize** the customer-facing speaker with your company logo, branded colors, or another image.
