City Council To Pass Legislation Making Public Meeting & Hearing Spaces Permanently Accessible To Those With Hearing Loss

NEW YORK, NY — In a major step forward for both accessibility and civic engagement, the New York City Council will pass legislation tomorrow requiring that public assembly areas constructed or renovated using City dollars install "Hearing Loop" technology for those with hearing loss.

A hearing loop, also known as an induction loop, is a wire surrounding or crossing a room that is connected to a sound system. The loop transmits sound electromagnetically to telecoils in hearing aids and cochlear implants, eliminating background noise and providing a dramatically clearer signal to the wearer.

Intro 882-A, sponsored by Council Member Helen Rosenthal of Manhattan, requires the installation of Hearing Loop systems in City-funded capital projects with one or more public assembly areas. The legislation applies to both new construction and renovation projects with an estimated construction cost of \$950,000 or more. Under the City's current capital plans, the legislation would require that almost 300 projects be looped across New York City going forward.

By requiring their installation, this legislation will enable tens of thousands of New Yorkers to fully participate in public hearings and meetings. According to the Hearing Loss Association of America, about 20 percent of Americans report some degree of hearing loss.

Advocates for those with hearing loss believe that New York City is the first major municipality in the country to enact such legislation.

Said Council Member Rosenthal, "With this bill, the City of New York will ensure that more and more spaces every year will be truly accessible to those hard of hearing.

Hearing loop technology makes such a radical difference in the ability of so many to participate fully in public life, and I'm proud that as a City we have moved to make it not just a priority but a requirement in our public investments. I want to thank the advocates whose hard work made this possible, educating me and other policymakers on the importance of this issue and helping us reach a path toward getting this landmark legislation passed."

Council Member Rosenthal's bill also requires that security, information, and reception desks in any of the newly looped assembly areas be accessible to those with hearing loss via micro-loops. Directional signage for all public areas with hearing loops technology is mandated as well.

By July 2018, the Mayor's Office will be required to post an on-line list of City-managed assembly areas with hearing loops, including those slated to receive them. This list will be updated annually.

More specifics about the legislation can be found [here](#). Council Member Rosenthal sees this bill as an important step in enhancing the ability of those with hearing loss to participate in City affairs, with more legislation to come.
